

PANDORA'S PROMISE

Ken Phipps, retired Development Chemist from Mound Laboratory, will host the next **MOUND SCIENCE & ENERGY MUSEUM'S** "Wednesday Night Presentation," on Wednesday, April 22, 2015 at 7:00 PM.

Ken will show the documentary "Pandora's Promise," a no-nonsense documentary on nuclear power from an environmentalist perspective, that SUPPORTS nuclear energy. Contradictory positions? Not really.

The documentary looks at the source and the reasoning behind the no-nuke movement. It reveals the basis for those fears without mocking them. It then dives into the actual, non-political science behind nuclear power's past, failures, and present. It is done in a non-threatening manner that is interesting and compelling.

Ken reminds us that Mound Laboratory had a Reactor Fuels Program in its early years. This research supported the Nuclear Powered Airplane Program and the Commercial Nuclear Power Program.

Ken received a BA in Chemistry from Southern University, Carbondale, IL. in 1960. He was employed at Mound from 1960 to 1992 as a Development Chemist, then as a Development Supervisor. He also served six years as SW Nuclear Facility Building Manager.

Ken's presentation will take place at the **MOUND SCIENCE & ENERGY MUSEUM**, 1075 Mound Rd., Miamisburg, OH. on April 22, 2015, at 7:00 PM. For additional details please check our web site at <http://www.moundmuseum.com>, or e-mail us at: msem475@gmail.com. Program is open to the general public and ample parking is available.

Next month, May 27, 7:00 PM, our topic will be: "Heavy Chemistry in Miamisburg – CSX Train Derailment Causes Mass Evacuation in Miamisburg, July 8, 1986," with guest speaker, Billy N. Ring, (Ret.) Captain from the Miamisburg Fire Department. He will provide pictures and videos of the disaster.
